

Alaris® Syringe module-compatible syringes and flow rate ranges

Alaris® products

Medications delivered on the Alaris Syringe module must be prepared in a syringe that accommodates the desired flow rate. The following chart shows the flow rate ranges for each syringe size. In addition, the compatible syringe sizes with reorder numbers are displayed.

To decrease potential start-up delays, it is recommended to use the smallest syringe necessary to deliver the fluid or medication, especially when delivering medications with a short half-life (*for example, if infusing 2.3 mL of fluid use a 3 mL syringe*).
