

1. Installing the VPN Software (Big-IP Edge Client™) on your Mac Computer

Preliminary Notes:

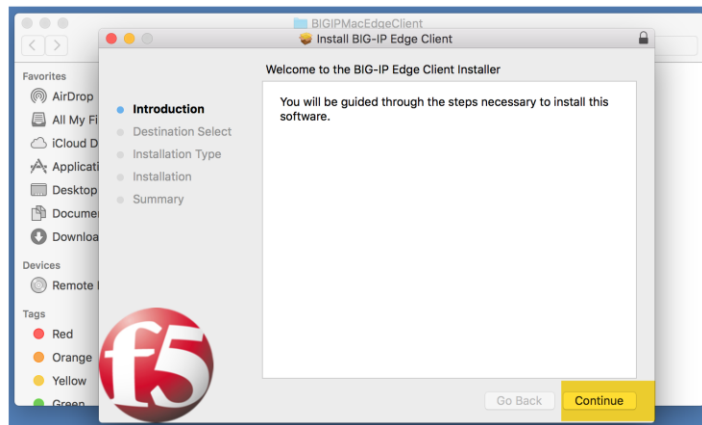

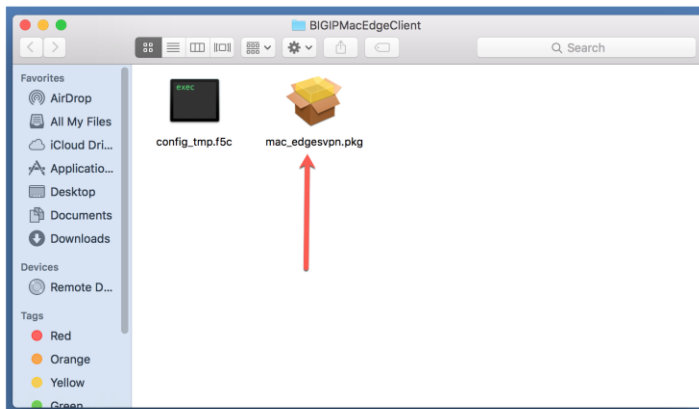

- You will need administrative privileges on the computer to install the VPN software.
- If you already have BIG-IP Edge Client, please remove it and reinstall the latest version.

Download the needed software from: <https://download.hscs.virginia.edu/BIGIPMacEdgeClient.zip>

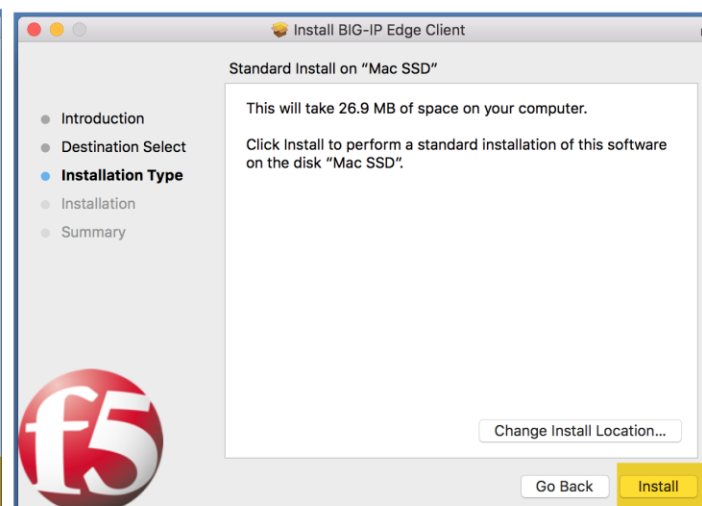

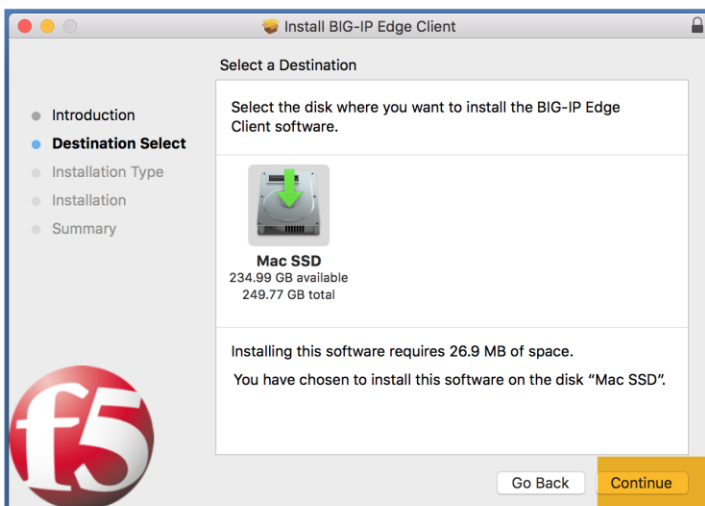

After the download is complete, open the installation package from the browser, as shown below:

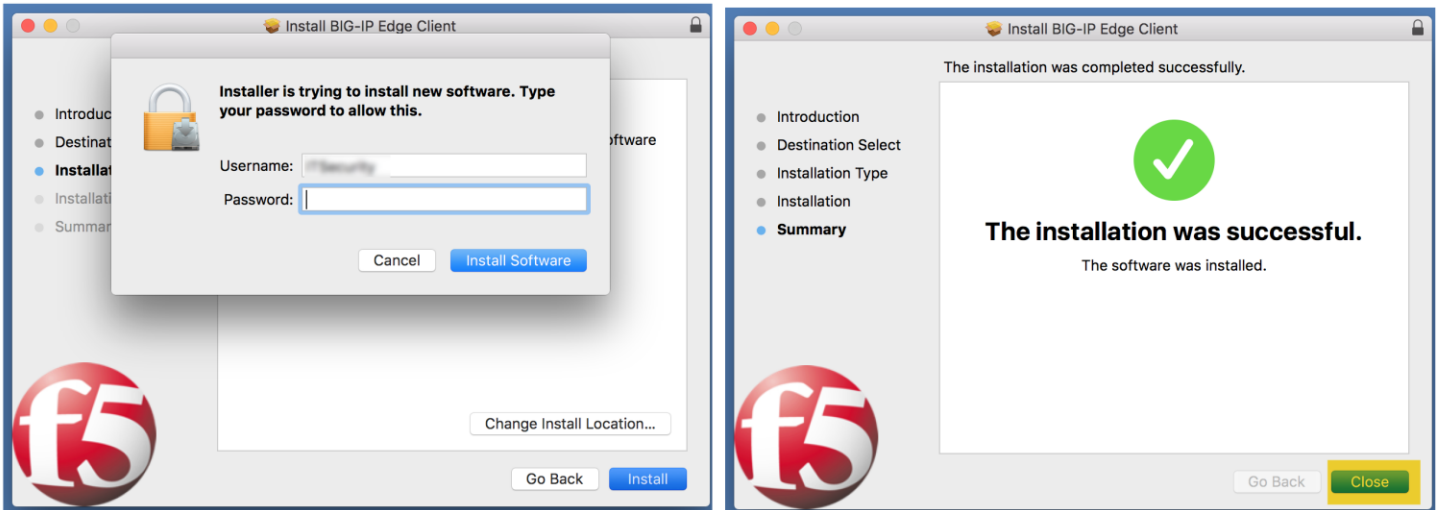

This will open the installer folder. Now double click on `mac_edgesvpn.pkg` file to launch the installer then click *Continue* to proceed.

You must select the disk for installation. It is recommended that you follow the default settings and install on the main disk. Click *Continue* to proceed and then *Install*.

You will need to enter your user name and password of your mac to continue. It's usually the same password that you use log into your mac. Enter the password and click *Install Software* to continue. That step will complete the installation so click *Close* to finish.

2. Setting the correct server and logging into the Health System Network

To open the VPN client, open Finder

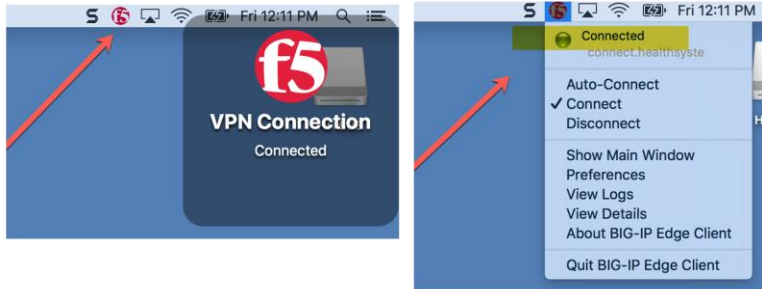

Then navigate to applications folder and launch the **BIG-IP Edge Client**:

After BIG-IP Edge opens, enter your credentials as follows and then click *Logon* to connect.

After the BIG-IP Edge Client successfully connects, the f5 logo will appear in the top right. If you click on that logo you can see your connection status:

You are now connected to UVA Health System VPN and should have access to Health System resources via the web browser or using Remote Desktop.
